-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

This office action is in response to the amendment filed 12/05/05. A new ground of rejection is introduced.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yanagawa et al. (USP 592694) in view of Imamiya (USP 6486729).

Yanagawa et al.'s figure 3 shows a charge pump circuit comprising: charge transfer transistors (11, 12); a capacitor (16) having one end connected to connecting point of the charge transfer transistors; a first clock driver (50) for supplying clock pulse to the other end of the capacitor; a second clock driver (40) for supplying clock pulses to the other end of the capacitor and having higher driving capacity than the first clock driver; and a clock driver control circuit (circuit, not shown, that generating the Active Signal) for initiating operation of the first clock driver when the charge pump circuit starts operating and initiating operation of the second clock driver after a predetermined elapsed time, wherein the clock driver control circuit stops operation of the first clock driver at an end of the predetermined elapsed times (at the end of standby mode). Thus, figure 3 shows all limitations of the claim except for plurality of capacitors coupled to plurality of transistors. However, Imamiya's figure 5 shows a charge pump circuit having plurality of transistors and capacitors. Therefore, it would have been obvious to one

having ordinary skill in the art to add more transistors and capacitors connected in series with Yanagawa et al.'s transistor for the purpose of increasing the output voltage level.

***Allowable Subject Matter***

3. Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 8 and 9 are allowed.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quan Tra whose telephone number is 571-272-1755. The examiner can normally be reached on 8:00 A.M.-5:00 P.M..
